# Premier One

How to get started

The sign in and setup process for your new workstation is extremely simple. Once you have all necessary cables and equipment plugged in and you are ready to go, power on the workstation.

1. You will need to make sure your workstation is connected to the internet, either by plugging in an Ethernet cable or by connecting to your wifi network. You can find the menu to connect to your wifi network on the sign-in screen, in the bottom right.

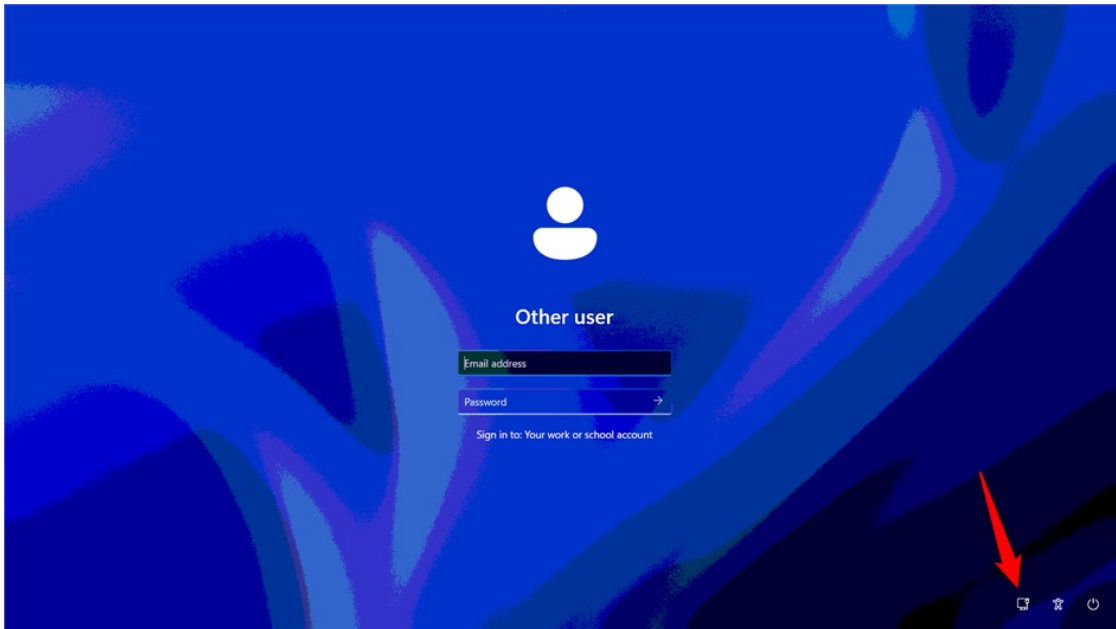

2. Once you are connected to a network, simply sign in to your Lender's Title Email Address.

Premier One
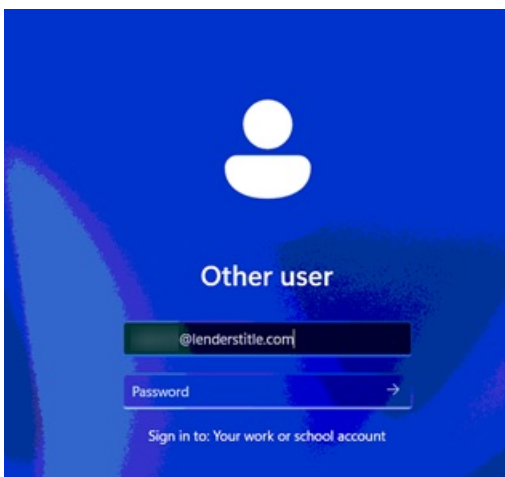

3. Once you are signed into your profile, you can access the Remote Desktop application and Microsoft Edge for browsing. Primarily, you will be accessing your secure remote workspace by opening the red Remote Desktop application.
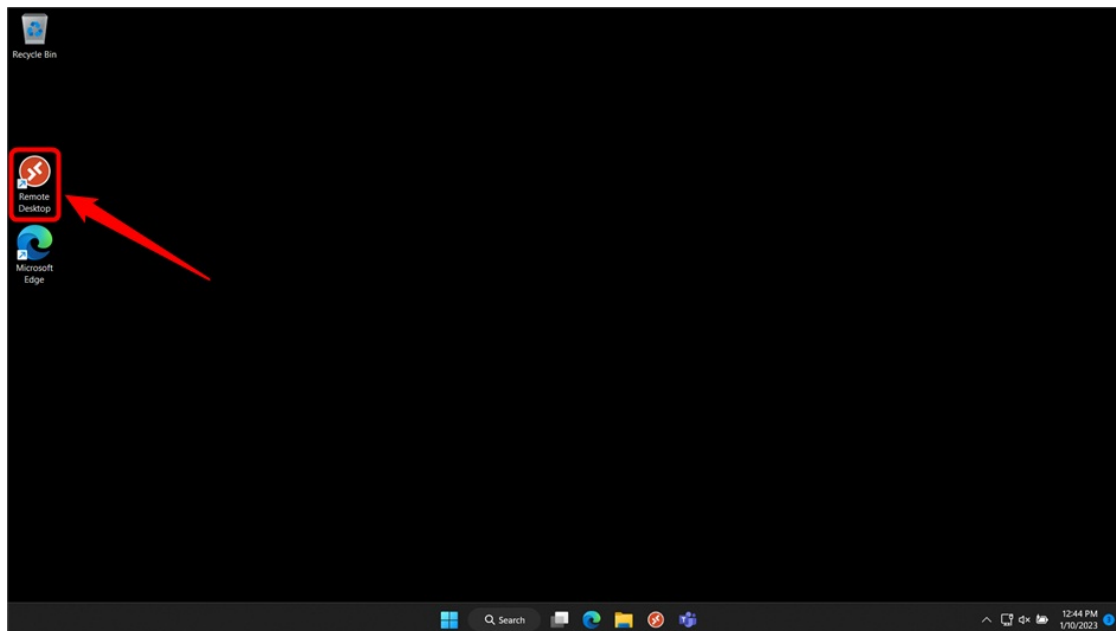

4. Once open, the Remote Desktop application will automatically subscribe you to your secure remote workspace. This process can take a few seconds.
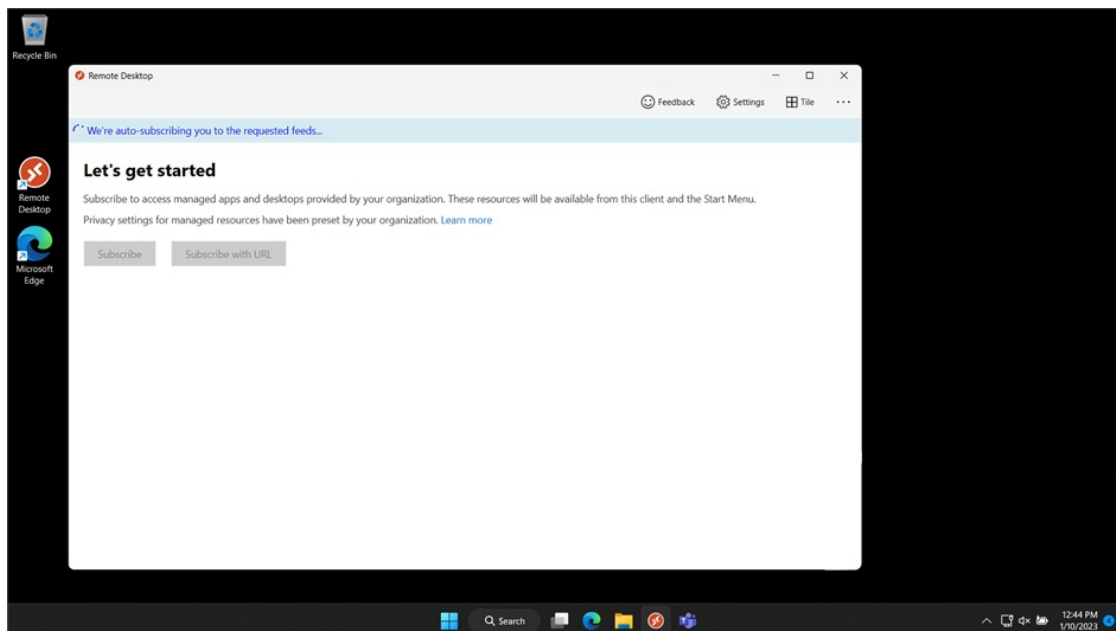

5. From there, simply double-click the workspace icon when it appears, and you'll be asked to sign in once more with your Lender's Title email address. Afterwards your secure remote workspace will launch in a new window.
